ADVANCED USB SMARTCARD PROGRAMMER

INFINITY® USB UNLIMITED

INFINITY® USB UNLIMITED

Infinity USB Unlimited is one of the fastest and smallest programmers on the market, designed and manufactured using the latest technology.

EASY TO USE   Software supports all Phoenix/Smartmouse compatible OS-cards, as well as secure cryptocards through the use of a VCP optimized for smartcard communication. Special cards (Fun/PIC) are accessed directly from the Infinity USB Unlimited software.

SDK/API   The software development kit, enables developers to integrate the Infinity USB Unlimited with their own product, for access control, secure storage of data or anything else involving a smartcard.

VERSATILE   Two smartcard connectors supports both standard sized smartcards (ISO7816) and SIM-cards. Includes software for editing and backing up SIM cards, as well as software for password storage and access control.

INNOVATIVE DESIGN   Very small and exclusive custom designed white casing. RGB (full colour) LED shows activity and programming states.

FUTURE-PROOF   Firmware is upgradable making it possible to support future smartcards. Hardware supports 5V (Class A) and 3V (Class B) smartcards. A USB 2.0 fullspeed USB port and a powerful 25 MIPS CPU ensures that the hardware meets future requirements.
